

PURPINATOR® FEED CHART

PURPINATOR® can be used during the entire life cycle of your plant.

Vegetating phases of growth (Week 1-4): Add .5 - 1.25 mL per litre of water.

Early bloom phase of growth (Week 5-9): Add 1.5 - 3.75 mL per litre of water.

Late bloom phase of growth (Week 10+): Add 5 - 7.5 mL per litre of water.

PURPINATOR® won't burn plants when used as directed, and can be used with any growing media, hydroponic system, and nutrient program. PURPINATOR® is at the correct pH for hydroponic use.

Week	1 - 4	5 - 9	10 +
Amount	2-5mL	6-15mL	20-30mL

- PURPINATOR® can be fed as frequently as every watering
- **For deep water culture systems:** change reservoir once every 3-5 days. Maintain aeration within the reservoir when using PURPINATOR®
- Safe for use in all fertilizer injectors
- Store in a cool, dry place, away from direct sunlight
- All measurements are per litre of water
- **DO NOT** use as a foliar spray
- Purpinator is a highly concentrated fertilizer at the limit of solubility - if crystalization occurs, shake or agitate well before use
