

Essential food for microbes

KARBO BOOST

WHAT IT IS:

Karbo Boost is a mixture of naturally occurring carbohydrates derived from multiple sources. Through the process of photosynthesis in combination with carefully selected sugars, Karbo Boost will provide the essential food for microbes.

BENEFITS:

- 32% Sucrose (derived from molasses) (microbe food)
- 32% Dextrose (derived from cane sugar) (microbe food)
- 36% Fructose (derived from agave sugar)

DIRECTIONS:

Dissolve 1 g per gallon or 30g per 25 gallons of Karbo Boost into water. Use with every watering throughout the flowering stage.
(3.78 Liters= 1 US gal)

WHAT IT DOES:

Both simple and complex carbohydrates that give your plants the energy that they need during the flowering phase. Can be applied during the entire crop cycle as a base food to assist many of the beneficial bacteria and fungi.
