

Phosphorus potassium
boost for your plants

BUD BOOSTER

WHAT IT IS:

Bud Booster is a specialty flowering fertilizer used in conjunction with your regular fertilizer program.

BENEFITS:

Bud Booster is most effective when buds are forming and continue with every fertilizer application during the bloom cycle

DIRECTIONS:

Use Bud Booster at a rate of 6g/20L or 1tsp/5Gal when buds are forming and continue with every fertilizer application during the blooming cycle. Stop using it in the last week of flowering. (3.78 Liters = 1 US gal)

WHAT IT DOES:

Bud Booster is an original bloom additive, because of its high level of phosphorus, helps promote blooming and assists in the plants metabolism during the middle of the flowering stage.

The potassium helps improve the quality of your flowers/fruit and helps with the plant's starch production.
