

**There is only one
original CO₂ bag.
Do not settle
for anything less!**

Maintenance Free! No Heat, No Electricity, Just CO₂
Plants growing indoors under artificial light often lack enough CO₂ to efficiently photosynthesise. When plants are able to maximise the process of photosynthesis, the result is larger plants with bigger yields.

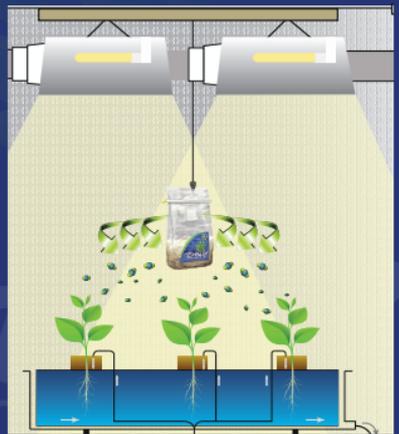

ExHale bags cultivate CO₂ 24 hours a day with no need to refill bottles or use expensive CO₂ production units. The power of ExHale lies in the mycelial mass inside the bag. This mycelial mass cultivates CO₂ which is continually released through a one-way breather patch.

ExHale bags can be used for both vegetative plant growth as well as for fruit and flower production.

ExHale CO₂ Bags are stored in a temperature controlled environment, keeping the CO₂ producing mycelium in optimal condition.

ExHale Regular and **XL** bags are generating CO₂ right from purchase. No need to activate, simply place the bag in your grow space and leave it alone to do its job. They are perfect for small to medium grow spaces ranging from 1.2m x 1.2m to 1.8m x 1.8m in size. Providing your plants with all the CO₂ they need for a guaranteed 6 months!

ExHale 365 is a self activated bag which provides CO₂ to your grow room for 9 months. Utilising a separation seam that allows the spawn pod to remain active and also allows for specific timing of CO₂ production. Once initiation has occurred, CO₂ production will begin in earnest with peak CO₂ production beginning after 30-45 days. CO₂ will continue to be released for the remainder of 9 months. With 3 months shelf life and 9 months of CO₂, you've got yourself a year! That's ExHale 365!

When you first purchase your ExHale CO₂ bag, the bag may be brown or white, both are fully activated. The brown colour is the substrate and the white is the CO₂ producing mycelium. It is best to use the replace by date when judging the age of the bag. The filter releases carbon dioxide at a set rate whether the substrate is brown or white. Most bags turn white and stay that way, while some may turn white and then turn a different shade of brown, usually more of a tan colour.

EXHALE HELPS YOU GROW BIGGER!

Your plants breathe CO₂, ExHale bags deliver fresh, inexpensive CO₂ right where you need it.

- 6 months of CO₂ guaranteed
- 20-30% increase in yields
- Maintenance free
- No heat, no electricity
- Patent pending genetics
- Made in the USA
