

INCREASE TERPENOIDS AROMATICS DRY WEIGHT

Terpinator, what is it?

Terpinator was created from years of researching naturally occurring plant compounds that are bio-osmotic potentiators. Through this patented scientific process your plants will utilise these compounds to enhance their production of terpenoids and plant oil producing glands. These glands are brought to their maximum potential and size using Terpinator along with any nutrient program.

Available in 1Ltr, 4Ltr, 10Ltr, 23Ltr

How does it work?

The building blocks that comprise Terpinator act as pre-cursors to plant oil production. By employing naturally occurring plant and biological compounds, unique enzymatic pathways within a plant's body are utilised through Terpinator to enhance the production of terpenoids and plant oils. Some types of plant oils have terpenoids, or compounds that contain very interesting odour molecules. Terpenoids are molecular compounds that consist of repeating units of a 5-carbon structure called isoprene. Many plants incorporate aromatic compounds that produce a plethora of odours that have been long thought to affect our physiology through odour activation (aromatherapy).

Directions

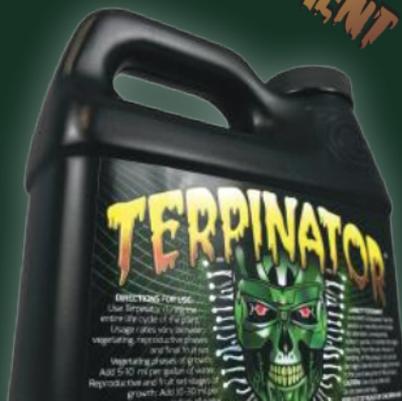

You can use terpinator during the entire life cycle of the plant. Compatible with any brand of fertiliser.

Usage rates vary between vegetative, reproductive phases and final fruit set.

Vegetating phases of growth:
Add 5-10ml per 3.8 litres of water.
Reproduction and fruit set stages of growth:
Add 10-30ml per 3.8 litres of water.

For soil/soil-less and hydroponic applications.
