

Storage Instructions

Applies to all wet Plug Life Products

Wet products are supplied **ready for immediate use** and are intended to be used as soon as possible after delivery.

Recommended storage

To minimise the risk of surface mould during storage:

- Store the products below **15°C (59°F)** whenever possible.
- Keep the products in a cool, dry and well-ventilated area.
- If the products are not used immediately, remove the cardboard corner protectors, as mould is more likely to develop where the cardboard is in contact with the trays or plugs.
- For extended storage, remove the stretch wrap. Please note that this may cause the products to dry unevenly over time. If necessary, simply re-wet the plugs before use.

Shelf life

Wet products have a **recommended shelf life of up to 6 months** when stored under appropriate conditions. This shelf life applies to **product performance**, including rooting performance, water uptake and product structure.

Surface mould

Wet products contain moisture and organic raw materials. As a result, **visual surface mould may develop during storage**, particularly at temperatures above **15°C (59°F)**. Higher storage temperatures increase the likelihood of mould development.

The **6-month shelf life applies to product performance only and should not be interpreted as a guarantee against visual surface mould during storage**. The development of surface mould depends on storage conditions, including temperature, humidity and ventilation.

Therefore, **Plug Life do not guarantee the absence of visual surface mould during storage**, even when the recommended storage guidelines are followed.

Flow-packed products

Due to the enclosed packaging and the moist nature of wet flow-packed products, **visual surface mould may develop during storage**.
